- On-screen GUI with mouse/touch USB control

- Mini Controller from Mobile Device

- Web/ SW-based Online Director

- AREC Recording APK for Android Interactive Whiteboards*

* Please consult with your vendor to confirm if your board is supported.

Local and Remote Storage

AREC Software/Cloud

AREC's complete solution allows users to integrate lecture capture, streaming, and video conferencing in hybrid education settings. It can be further enhanced with free-to-use software and API. For example:

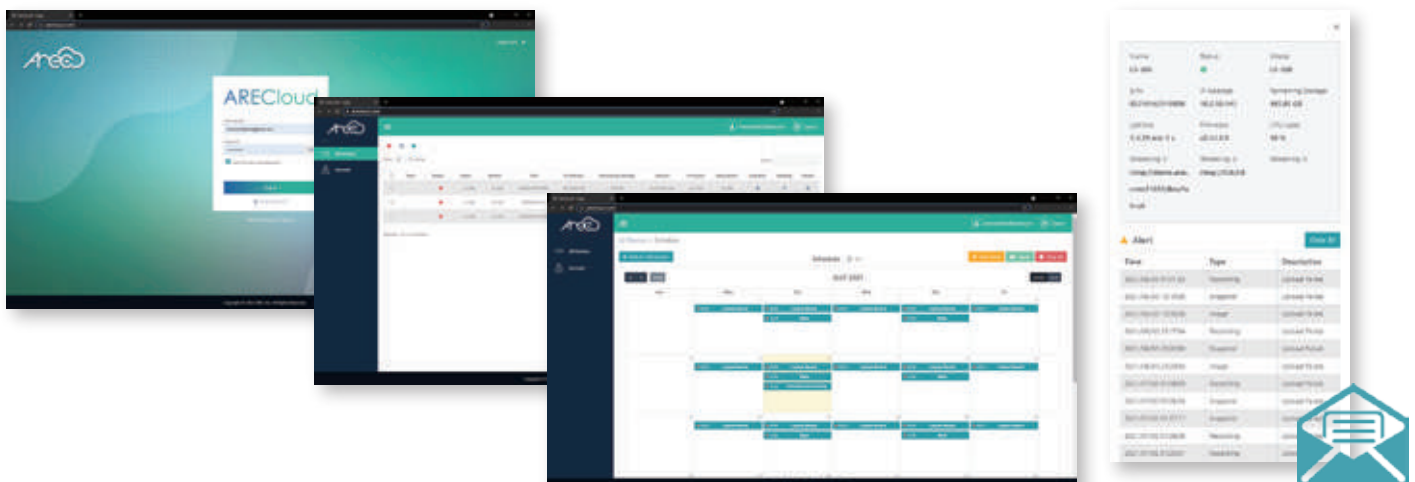

AREC Station Manager

Through AREC Station Manager, users can carry out remote computer monitoring and central control for batches of stations. It is possible to switch recording/streaming themes, access preview, and operate stations in groups with this application.

ARECloud

ARECloud is a free cloud service that can help administrators remotely monitor and manage all AREC Media Stations from one place in real-time. It also supports batch recording control, preview, recording/streaming theme control, recording scheduling, and email alarm notifications, making it an all-in-one tool that doesn't need installation.

AREC Auto-Tracking PTZ Cameras

Adopting AREC's excellent motion-sensitive tracking technology, AREC Auto-Tracking PTZ Camera has zero setup time, which can track a moving presenter automatically and ensures that presenter is always in close-up and in the center of the frame.

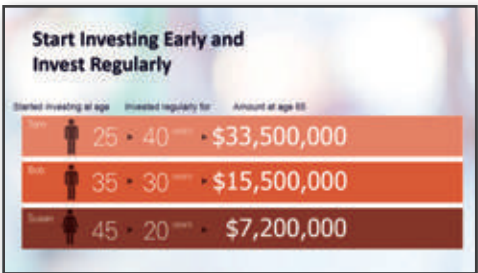

DS-4CU Speaker Tracking Station

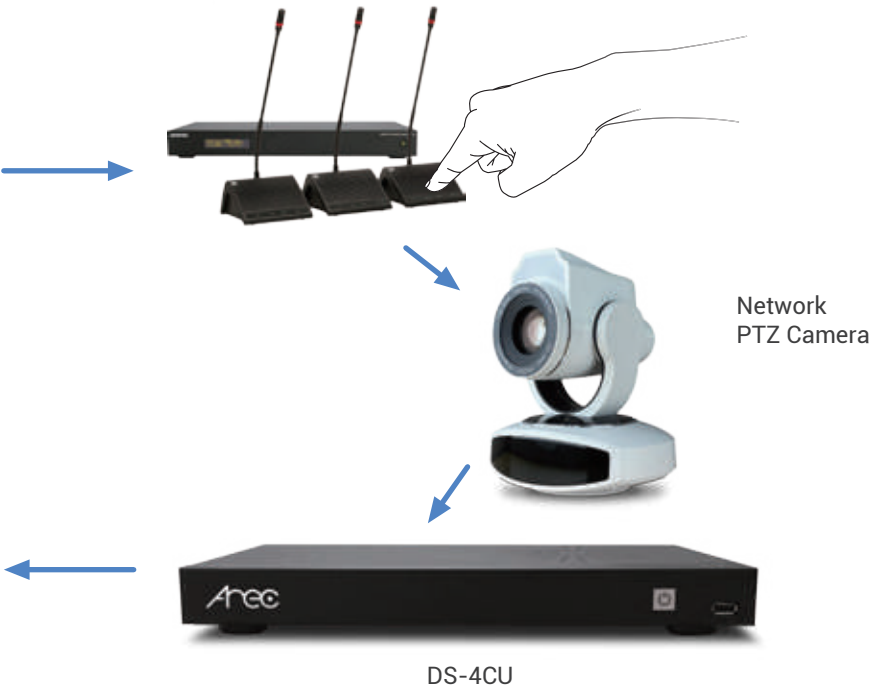

DS-4CU Station by pressing microphone button allows:

- Automatic camera selection
- Automatic layout switching
- Automatic display of predefined themes (combinations of backgrounds, layouts, and overlays)

Presentation Slides
(Available for Customization)

Presentation Slides + Camera
(Available for Customization)
